Stefano Bianda - Software Manager

I have a strong experience in software development. For 25 years I am leading projects as Technical Project Leader and 15+ years as Head of the development team in embedded and web applications.
The quality of the software is for me a priority: in Viseca the overall releasability of the projects has increased since I have introduced the automated process and controls; in Schindler the MTBF is passed from 2 to 12 months.
I proposed and implemented the digital transformation and automation of the building process: all projects are using the shared pipeline, the quality of the software is increased and the manual deploy is replaced by tools. I also push for containers with docker and kubernetes, supporting cloud native applications.
I grouped different teams and align the strategy of building the software using the same tools and processes, enforcing the use of unit test (TDD).
I coordinated and lead complex projects, I solved many problems by analysing and understanding the root cause.
I love technology and aim to create added value for my stakeholder using my creativity and innovate tools and processes.

Viseca Payment Services SA

From 01.04.2017 **Principal DevOps Eng - Head of SW Development**

- Product Owner and Scrum Master of CICD shared pipeline
  - Stakeholder meeting, daily StandUp
- Leading team, agile methodology, test driven development, code review
  - Groovy, Java, Junit
