

# Stefano Bianda – Head of Software Development

I have wide experience in software development, with 25 years as a technical project leader and more than 15 years as head of software development team in embedded and web applications, managing 30 to 50 developer engineers, following agile methodologies.

Software quality is a priority for me: as a leader at Viseca I proposed and implemented automation of the software development process, standardized the use of a shared infrastructure, and convinced everyone to the use of unit testing (TDD methodology), thus improving the software quality of all company projects. At Schindler, I achieved the goal of increasing MTBF from 2 to 12 months.

I love technology and aim to add value for stakeholders by using my creativity and innovating tools and processes. I have promoted container adoption with Docker and Kubernetes, supporting native cloud applications. I enjoy working in teams and sharing my experience with others.
